

WALEED HASSAN

SOFTWARE ENGINEER

CAREER OBJECTIVE:

Dynamic and versatile software engineer dedicated to delivering high-quality, user-centric web applications with a focus on performance, scalability, and security. Eager to collaborate within a forward-thinking team to leverage diverse skill sets and innovative technologies to solve complex challenges. Committed to continuous learning and growth to stay at the forefront of the web development landscape.

PROFESSIONAL EXPERIENCES:

Senior Software Engineer:

Jan 2026 – Present

Creative Hospitality

Responsibilities:

- Designed, developed, and maintained scalable, high-performance applications using PHP (Laravel) and Python (Django), ensuring clean architecture and efficient data handling.
- Built optimized RESTful APIs and web services, improving system performance and enabling seamless integration across platforms.
- Implemented Elasticsearch solutions, including indexing and query optimization, to improve search performance on large datasets.
- Deployed and managed applications on AWS EC2, ensuring high availability, monitoring, and performance optimization.
- Maintained code quality using Git and Bitbucket with effective branching, version control, and code review practices.
- Built automated testing frameworks using Selenium and Playwright, reducing regression issues and accelerating release cycles.
- Supported system design, mentored developers, and collaborated with cross-functional teams to deliver scalable solutions.

Achievements:

- Developed SaaS-based HRMS with time tracking, attendance, payroll, employee management, appraisal modules.
- Built scalable, secure architecture with integrated voting and appraisal systems to enhance employee engagement and decision-making.
- Automated payroll, attendance, and reporting processes, reducing manual effort and improving data accuracy.

Software Engineer:

May 2024 – Present

Utility Stores Corporation Pakistan

Responsibilities:

- Customize and develop Odoo modules (Sales, Inventory, Accounting) in Python and JavaScript to meet business needs.
- Manage Odoo 17 upgrades and migrations, ensuring compatibility with ERP systems, custom modules, and integrations.
- Integrate Odoo in external systems (eCommerce platforms, APIs, payment gateways, and Netsuite) for seamless data exchange.
- Optimize performance using PostgreSQL, troubleshoot issues, and maintain high system efficiency.
- Provide ongoing technical support and resolve complex user issues.
- Collaborate with cross-functional teams to gather requirements, document customizations, and train users.
- Conduct code reviews, write unit tests in XML, and uphold best practices.
- Utilize Docker for containerization and manage integrations with web services.

Achievements:

- Developed custom HR module, automating evaluations and reducing processing time by 40%.
- Automated workflows in Sales and Inventory, cutting processing time by 20%.
- Successfully migrated from Odoo 14 to Odoo 17 with zero downtime and data loss.

Web Developer:

May 2023 – May 2024

Khyber Pakhtunkhwa Information Technology Board

Responsibilities:

- Build, design, modify, and test B2C and B2B products and features using Python, Angular, and related technologies.
- Produce high-quality code with good test coverage using modern abstractions and frameworks, adhering to MVC principles.
- Integrate the back end of products and services with third-party Python-based products, CMS, and Azure services.
- Conduct code reviews to ensure coding standards and scalability, focusing on the user interface and front end.
- Document the code inline using JSDoc and similar conventions, and maintain a clear documentation of database interactions.
- Adhere to deadlines and milestones using project management tools, ensuring timely delivery of high-quality solutions.
- Develop test plans and strategies based on project requirements, addressing cookies and session management.

Achievements:

- Provided continuous real-time support for legacy and updated projects, ensuring seamless operations and user transition.
- Revamped the CI/CD pipeline with Jenkins, reducing deployment time by 40% and boosting productivity using jQuery.

Senior Software Engineer:

Dec 2022 – Jun 2023

Cache Cloud

Responsibilities:

- Implement Rest API and GraphQL APIs using backend programming languages like Node.js, Python, and C++.
- Utilize frameworks such as Selenium, Express.js, and FastAPI to build robust APIs, employing design patterns for maintainability.
- Design and optimize database schemas in DynamoDB and Snowflake for efficient data retrieval and data analytics.
- Proficiently manage cloud infrastructure with platforms like GCP, Git and AWS, utilizing Terraform and Infrastructure as code.
- Deploy and manage API infrastructure, leveraging Serverless architectures like Lambda for scalability.

Achievements:

- Performed PHP Pest end-to-end testing to resolve conflicts, ensuring system compliance, reliability, and stability.
- Developed and optimized templates for CQ5 and clipped applications, enhancing work efficiency.

Senior PHP Developer:

Feb 2019 – Jan 2023

Pixako Technologies

Responsibilities:

- Collaborate with back-end developers and designers to produce high-quality, well-architected solutions in an Agile environment.
- Write non-blocking code, employing techniques like multi-threading and problem-solving methods as needed.
- Manage container orchestration with Docker and Kubernetes for scalability and reliability.
- Modify existing software to meet new requirements and resolve defects while facilitating configuration management.
- Mentor team members on specification practices, coding standards, and testing methods.
- Perform unit testing to ensure developed features meet acceptance criteria.

Achievements:

- Developed a dealer phone ordering portal, optimizing order processes and improving customer satisfaction.
- Integrated AWS Snowflake to enhance query retrieval from large-scale databases, greatly improving operational performance.

Senior Software Engineer:

Apr 2021 – Jul 2022

Vfairs

Responsibilities:

- Develop applications following system specifications and technical documentation, focusing on microservices architecture.
- Create interactive web pages using HTML5, CSS, JavaScript, TypeScript, PHP, Laravel, React, and Node.js packages.
- Track bugs and project status using JIRA and Mingle systems, ensuring effective configuration management.
- Optimize API performance for low latency and high throughput, enhancing data visualization via tools like Grafana.
- Prioritize user-friendly interfaces for the IoT platform (web & mobile apps), utilizing state management techniques.

Achievements:

- Successfully migrated systems from Yii 2 framework to Laravel and React JS, enhancing features and SEO optimization.

PHP Laravel Developer:

Oct 2017 – Feb 2019

Iplex

Responsibilities:

- Design, develop, and deploy web server applications using the LAMP stack (Linux, Apache, MySQL, PHP).
- Implement security best practices to combat vulnerabilities and ensure compliance.
- Troubleshoot and debug issues for smooth application functionality and deploy containerized applications.
- Integrate payment gateways thoroughly, contributing to sustainability solutions in software development.
- Ensure cross-browser compatibility and optimize web applications for maximum speed and scalability.

Achievements:

- Established tier support levels for timely resolution of ICM issues following new customizations.

EDUCATIONAL CREDENTIALS:

DEGREE / CERTIFICATION	UNIVERSITY / INSTITUTE	YEAR OF PASSING
Bachelors in Computer Science	Abdul Wali Khan University	2017

PROFESSIONAL SKILLS:

SQL , PostgreSQL, Golang	Front-End, Back-End	PHP, Laravel, Cake PHP
Python, Selenium, Odoo ERP	Vue js, Node js, React js, Javascript	Git, BitBucket, JIRA
Stand-Alone API, Django	Bootstrap, Responsive Design	Test-driven development
